

Atanasoft® Announces Maintenance Update for the AtanaSuite® 2008 Product Family

Ames, IA – April 3rd, 2008 - Atanasoft today announces the immediate availability of version 6.2.0 for all products in the **AtanaSuite 2008** product family.

This maintenance update contains many significant enhancements to the functionality of the **AtanaSuite 2008** product family, as well as fixes and workarounds for reported Teradata issues. This is an important update that is available to all supported **AtanaSuite 2008** customers.

Enhancements in this **AtanaSuite 2008** maintenance update include:

- **Database Connectivity** – feature provides the mechanism to re-establish Teradata database connectivity within any open tool session. For example, if you are working in QueryTool and your database connection is interrupted, you can re-establish the connection without losing any of your work in progress. This advanced feature works with all tools and products.
- **Edit QueryTool and DeltaTool Active Script Jobs** – feature allows users to open previously created jobs; make modifications to the job detail and save these changes as either a new job or an updated version of the existing job! This great new feature works with jobs that are saved locally on your file system, as well as jobs that are saved in the *Active Queue* repository used by **AtanaSuite Active Server**. Now you can share jobs with your colleagues; make changes as needed and end up with a new job in a fraction of the time it would take to create it from scratch.
- **QueryTool SQL Helper** - now has the ability to perform replacement of Teradata views, macros and stored procedures. This is a nice, new feature that improves productivity for maintenance of Teradata database objects.
- **DeltaTool Name Substitution** – option has been modified in **AtanaSuite Enterprise** and **AtanaSuite Active Client** to help reduce known differences between database objects on different servers from being flagged.
- **Additional Routine Maintenance Items** – have been added to help improve productivity and resolve issues either identified by our customers or uncovered during our ongoing testing with supported database releases.

“We are very pleased to make this maintenance update available to our customers. This update shows our ongoing commitment to our customers, as well as our commitment to continuously improve the world’s most advanced suite of Teradata productivity tools.” says Nathan Sorensen, Atanasoft Support Center Site Leader. “This update contains several significant enhancements along with important routine maintenance. These improvements are a result of our continued effort to increase your Teradata productivity. Our Support Center and Development Center staff worked together to make this update happen. They received wonderful input from a wide range of AtanaSuite users and are thankful for this feedback.”

Availability – Existing **AtanaSuite 2008** customers with current support & maintenance contracts can download the maintenance update through the Atanasoft Support Center. Additional information regarding the enhancements and fixes provided can also be found in the README files available within the Atanasoft Support Center.

About Atanasoft - Atanasoft LLC is a software and services company specializing in productivity tools for Teradata. Its flagship product, **AtanaSuite**, is the world’s finest suite of productivity tools available for DBAs, developers, consultants and general users.
