

Atanasoft® Announces Maintenance Update for the AtanaSuite® 2009 Product Family

Ames, IA – October 31st, 2008 - Atanasoft today announces the immediate availability of version 7.1.0 for all products in the **AtanaSuite 2009** product family.

This maintenance update contains many significant enhancements to the functionality of the **AtanaSuite 2009** product family, as well as fixes and workarounds for reported Teradata issues. This is an important update that is available to all supported **AtanaSuite 2009** customers.

Enhancements in this **AtanaSuite 2009** maintenance update include:

- **IntelliSQL™ support for BTEQ language** – feature extends our innovative AtanaSuite IntelliSQL technology of keyword dropdowns, automatic completion, tooltips and mouseovers to commands within the BTEQ language. This feature is found in ScriptTool within AtanaSuite Expert 2009 and AtanaSuite Enterprise 2009 products.
- **SQL, Object and Script Map** – feature provides an additional dockable window to editors found within QueryTool, ObjectTool and ScriptTool. The window displays an outline or map of SQL or script keywords contained within the corresponding editor window. This map may be used to easily navigate complex SQL statements and/or scripts and select portions for copy and execution. For ScriptTool, this feature is available for BTEQ scripts. This feature is found in all AtanaSuite 2009 products that contain any of the aforementioned tools.
- **Automatic Outlining** – settings have been added to automatically control keyword outlining in SQL and BTEQ scripts. Automatic outlining is an advanced editing feature to AtanaSuite that helps users easily edit and manage Teradata SQL and BTEQ scripts. This feature is available in QueryTool, ObjectTool and ScriptTool editors and the AtanaSuite 2009 products which contain these tools.
- **JoinTool Added** – to AtanaSuite Pro 2009 and AtanaSuite Expert 2009 products. JoinTool, since its introduction in our AtanaSuite Essential and AtanaSuite Enterprise products, has made it extremely easy to create complex join queries. This tool is now available in all AtanaSuite 2009 client products.
- **New Configuration and Support Features** – have been added to all AtanaSuite 2009 products to help assure proper database connectivity configuration and ease support and licensing accessibility.
- **Additional Routine Maintenance Items** – have been added to help improve productivity and resolve issues either identified by our customers or uncovered during our ongoing testing with supported database releases.

“We are very pleased to make this maintenance update available to our customers. This update shows our ongoing commitment to our customers, as well as our commitment to continuously improve the world’s most advanced suite of Teradata productivity tools.” says Nathan Sorensen, Atanasoft Support Center Site Leader. “This update contains several significant enhancements demonstrated to customers and prospects alike at the PARTNERS 2008 conference in Las Vegas earlier this month. We appreciated the wonderful input and are thankful for this feedback.”

Availability – Existing **AtanaSuite 2009** customers with current support & maintenance contracts can download the maintenance update through the Atanasoft Support Center. Additional information regarding the enhancements and fixes provided can also be found in the README files available within the Atanasoft Support Center.

About Atanasoft - Atanasoft LLC is a software and services company specializing in productivity tools for Teradata. Its flagship product, **AtanaSuite**, is the world’s finest suite of productivity tools available for DBAs, developers, consultants and general users.
