

Atanasoft® Announces Maintenance Update for the AtanaSuite® 2008 Product Family

Ames, IA – December 17th, 2007 - Atanasoft today announces the immediate availability of version 6.1.0 for all products in the **AtanaSuite 2008** product family.

This maintenance update contains many significant enhancements to the functionality of the **AtanaSuite 2008** product family, as well as fixes and workarounds for reported Teradata issues. This is an important update that is available to all supported **AtanaSuite 2008** customers.

Enhancements in this **AtanaSuite 2008** maintenance update include:

- **Format SQL** – feature added to automatically format SQL in editor for readability. One click is all it takes to turn a SQL mess into a professional looking, organized and easily managed work of art. It can even be used as a syntax checker, by looking for incorrect formatting which is most likely caused by missing punctuation and the like.
- **Advanced SQL Editor Enhancements** – have been added to all editors within **AtanaSuite**. Over 25 advanced editing features normally reserved for high-end code editors are available; including line numbering, whitespace display, column guides, bookmarks, outlining, word wrap, block commands and more.
- **QueryTool SQL Helper** - has been totally re-designed to provide additional quick SQL commands, more functionality, and improved performance. The new tree-style control now supports display of column, table index, parameter and XSP objects as well as the SQL command completion associated with them. New SQL Helper toolbar includes refresh and **AtanaSuite** tool-to-tool integration capabilities. It also supports multi-selection for most SQL commands - so multiple objects can be selected and the SQL generated instantaneously for all of them.
- **MigrateTool Copy Statistics Data** – option has been added for table, join index and hash index migration. This enables statistics data to be copied from one server to another without recollecting.
- **MigrateTool Secondary Index Copy** – is now included with table copies. Copy a table and its secondary indexes are now included as part of the process; thus eliminating an extra copy step.
- **DeltaTool Name Substitution** – option has been added to **AtanaSuite Enterprise** and **AtanaSuite Active Client** to help reduce known differences between database objects on different servers from being flagged.
- **Additional Teradata 12 Support** – has been added to help resolve issues uncovered during our testing with the latest release of the database.

“We are very pleased to make this maintenance update available to our customers. This update shows our ongoing commitment to our customers, as well as our commitment to continuously improve the world’s most advanced suite of Teradata productivity tools.” says Nathan Sorensen, Atanasoft Support Center Site Leader.

Availability – Existing **AtanaSuite 2008** customers with current support & maintenance contracts can download the maintenance update through the Atanasoft Support Center. Additional information regarding the enhancements and fixes provided can also be found in the README files available within the Atanasoft Support Center.

About Atanasoft - Atanasoft LLC is a software and services company specializing in productivity tools for Teradata. Its flagship product, **AtanaSuite**, is the world’s finest suite of productivity tools available for DBAs, developers, consultants and general users.
